Professional Summary

Results-driven Data Engineer with hands-on experience in designing, building, and optimizing data pipelines and ETL workflows using Python, SQL, and PySpark. Skilled in data validation, transformation, and modeling for scalable analytics solutions. Proficient in working with Databricks, vector databases, and cloud environments (AWS). Strong collaborator with a track record of improving data quality and enabling data-driven decision-making.

Education

Indira College of Engineering and Management, Pune **Nov 2022 – May 2026**

Bachelor of Engineering in Artificial Intelligence and Data Science

Experience

Tripify **Sep 2025 – Present**

AI Agent Developer Intern

- Designed and optimized data-driven pipelines integrating APIs and vector databases for improved data accessibility and analysis.
- Automated data flow and response systems using LangGraph and LangChain, enhancing speed and scalability.
- Implemented data quality checks to maintain consistency across multiple sources.
- Collaborated with backend engineers to improve ETL-like workflows, enabling efficient data transfer and transformation.

Decloud Labs **Jan 2025 – Jun 2025**

Artificial Intelligence Intern

- Built end-to-end data pipelines for retrieval-augmented generation (RAG) systems using LangChain and SQL.
- Developed ETL workflows to clean, transform, and store large-scale datasets in cloud environments.
- Enhanced data retrieval and query performance using vector databases integrated with Databricks.
- Ensured data accuracy, compliance, and audit readiness across analytical systems.
- Collaborated on AI-driven tools that improved data accessibility and processing efficiency across teams.

Projects

AquaNav | *Python, MYSQL, Data Engineering*

- Developed a data pipeline integrating real-time weather, traffic, and ocean data for dynamic route optimization.
- Utilized SQL for data cleaning, transformation, and storage
- Built automated data validation systems ensuring integrity of live maritime data streams.
- Applied *D Lite pathfinding algorithms** and graph-based analytics to determine efficient maritime routes.

Cancer Detection System | *Python, Numpy, Pandas, Sk-learn* *Code*

- Performed ETL operations on the Wisconsin Breast Cancer dataset to prepare high-quality training data.
- Applied feature engineering, model selection, and validation techniques to improve prediction accuracy.
- Achieved 95% classification accuracy using Random Forest and SVM models.
- *Documented and automated the data pipeline for reproducibility and performance tracking*

Technical Skills

Languages: Python, SQL, PySpark, HTML

Technologies/Frameworks: Pandas, NumPy, OpenCV, scikit-learn, LangChain, TensorFlow, PyTorch, Matplotlib, Seaborn

Data Engineering: ETL Pipelines, Data Modeling, Data Warehousing, Data Validation, Data Quality Checks

Related Course Work: Problem Solving, Machine Learning, Deep Learning, Data Science, Computer vision, Data Processing, Natural Language Processing

Tools: Github, Jupyter Notebook, Power BI, Databricks
