Education

Indira College of Engineering and Management, Pune **Nov 2022 – May 2026**

Bachelor of Engineering in Artificial Intelligence and Data Science

Experience

Decloud Labs **Jan 2025 – Jun 2025**

Artificial Intelligence Intern

- Engineered end-to-end AI pipelines using LangChain for retrieval-augmented generation (RAG) systems.
- Integrated vector databases with LLMs to improve context-aware question answering and document search.
- Fine-tuned and evaluated LLMs for domain-specific tasks, enhancing model accuracy and response relevance.
- Collaborated on building chatbot assistants that interact with user-uploaded files and external sources using prompt engineering.
- Documented workflows and optimized performance, ensuring modular, scalable, and production-ready AI components.

21 Spheres **Dec 2024 - Jan 2025**

Computer Vision Intern

- Developed a real-time object detection system using YOLO with optimized speed and accuracy.
- Applied advanced preprocessing techniques to enhance image quality in dynamic environments.
- Streamlined image processing workflows using GPU acceleration for improved performance.
- Refined the model thorough testing to ensure reliable and consistent object recognition.

Projects

AquaNav | *Python , MYSQL*

- Developed an AI-based system that uses the D* Lite algorithm to dynamically plan and re-route ocean navigation paths in real time.
- Incorporated real-time environmental and geographical data like weather, sea currents, and terrain to improve route efficiency, safety, and reduce fuel usage.
- Applied advanced concepts in graph theory and pathfinding to solve complex maritime routing challenges.
- Built a responsive decision-making system capable of adapting to sudden changes during a vessel's journey.

Cancer Detection System | *Python , Numpy, Pandas, Sklearn* *Code*

- Utilized the Wisconsin Breast Cancer dataset to develop a machine learning model for tumor classification.
- Conducted data preprocessing, feature selection, and model training using algorithms like Random Forest and SVM.
- Achieved a classification accuracy of 95%, demonstrating strong predictive performance on unseen data.
- Enhanced early detection capabilities, contributing to faster and more reliable breast cancer diagnostics

AI Based Assesment System For MCQ | *Python, Tesseract, OCR, OpenCV* *Code*

- Developed an AI-powered assessment system to automatically evaluate multiple-choice questions with high accuracy and speed
- Implemented intelligent answer validation using OCR and machine learning techniques to ensure fair and efficient grading.
- Designed a user-friendly interface for students and educators to take tests, view results, and track performance.
- Streamlined the evaluation process, reducing manual effort and enabling scalable, real-time assessments.

Technical Skills

Languages: Python, SQL, HTML

Technologies/Frameworks: Pandas, NumPy, OpenCV, scikit-learn, LangChain, TensorFlow, PyTorch, Matplotlib, Seaborn, Tensorflow

Related Course Work:, Problem Solving, Machine Learning, Deep Learning , Data Science , Computer vision, Data Processing , Natural Language Processing , Artificial Neural Network

Tools: Github, Jupyter Notebook, Power BI

Certifications

Power BI Link

Business Analysis and Process Management *Link*

Data Analytics and Visualization *Link*

Google Cloud Computing *Link*

Fundamental Of Gen AI *Link*

GenAI for Business Intelligence Analysts *Link*
