# Anurag Sandbhor

Pune, India

+91 8010148597 anuragsandbhor1111@gmail.com https://www.linkedin.com/in/anurag-ssandbhor/

## Education

**Indira College of Engineering and Management, Pune** **Nov 2022 – May 2026**

*Bachelor of Engineering in Artificial Intelligence and Data Science*

## Experience

**Tripify** **Sep 2025 – Present**

*AI Agent Developer Intern*

- *Built intelligent AI agents capable of performing multi-step tasks through advanced reasoning and dynamic tool usage.*
- *Connected multiple APIs and vector databases to improve the agents' memory, contextual understanding, and user personalization.*
- *Developed automation workflows using LangGraph and LangChain to enable smooth and scalable agent operations.*
- *Worked closely with the backend team to fine-tune response times and ensure seamless integration within Tripify's travel platform.*

**Decloud Labs** **Jan 2025 – Jun 2025**

*Artificial Intelligence Intern*

- Engineered end-to-end AI pipelines using LangChain for retrieval-augmented generation (RAG) systems.
- Integrated vector databases with LLMs to improve context-aware question answering and document search.
- Fine-tuned and evaluated LLMs for domain-specific tasks, enhancing model accuracy and response relevance.
- Collaborated on building chatbot assistants that interact with user-uploaded files and external sources using prompt engineering.
- Documented workflows and optimized performance, ensuring modular, scalable, and production-ready AI components.

**21 Spheres** **Dec 2024 - Jan 2025**

*Computer Vision Intern*

- Developed a real-time object detection system using YOLO with optimized speed and accuracy.
- Applied advanced preprocessing techniques to enhance image quality in dynamic environments.
- Streamlined image processing workflows using GPU acceleration for improved performance.
- Refined the model thorough testing to ensure reliable and consistent object recognition.

## Projects

**AquaNav** | *Python , MYSQL*

- Developed an AI-based system that uses the D* Lite algorithm to dynamically plan and re-route ocean navigation paths in real time.
- Incorporated real-time environmental and geographical data like weather, sea currents, and terrain to improve route efficiency, safety, and reduce fuel usage.
- Applied advanced concepts in graph theory and pathfinding to solve complex maritime routing challenges.
- Built a responsive decision-making system capable of adapting to sudden changes during a vessel's journey.

**Cancer Detection System** | *Python , Numpy, Pandas, Sklearn*

- Utilized the Wisconsin Breast Cancer dataset to develop a machine learning model for tumor classification.
- Conducted data preprocessing, feature selection, and model training using algorithms like Random Forest and SVM.
- Achieved a classification accuracy of 95%, demonstrating strong predictive performance on unseen data.
- Enhanced early detection capabilities, contributing to faster and more reliable breast cancer diagnostics

## Technical Skills

**Languages**: Python, SQL, HTML

**Technologies/Frameworks**: Pandas, NumPy, OpenCV, scikit-learn, LangChain, TensorFlow, PyTorch, Matplotlib, Seaborn, Selenium

**Related Course Work**:, Problem Solving, Machine Learning, Deep Learning , Data Science , Computer vision, Data Processing , Natural Language Processing , Artificial Neural Network

**Tools**: Github, Jupyter Notebook, Power BI

## Certifications

*Power BI*

*Business Analysis and Process Management*

*Data Analytics and Visualization*

*Google Cloud Computing*

*Fundamental Of Gen AI*

*GenAI for Business Intelligence Analysts*
